# Exp 15: Analysis of Various Types of Servers Using Webalizer Tool

## AIM :

To analyse the different types of web server logs and generate usage statistics (monthly, daily, hosts, user agents, referrers and countries) using the Webalizer tool.

## ALGORITHM :

1. Start the experiment.
2. Download a sample web server access log file (e.g. `access_log`) from the web and save it on the system.
3. Install and run the Webalizer (Windows version).
4. In the **Choose Logfiles** tab, add the downloaded access log file as the input log file.
5. Select the target directory where the generated HTML reports are to be stored.
6. Press **Run Webalizer** to process the log file.
7. Open the generated report and view the Monthly statistics (Last 12 Months, Monthly, Daily and Hourly statistics).
8. View the other reports: URLs, Entry/Exit pages, Errors, Hosts, Referrer, Searches, Usernames, User-agents and Countries.
9. Analyse the number of requests (hits), files, pages, visits, sites and the amount of data transferred (kB).
10. Stop the experiment.

## PROCEDURE :

Webalizer is a fast, free web server log file analysis program. It reads a web server log file (Apache/Common Log Format) and produces detailed usage reports in HTML format that can be viewed with a normal web browser. The reports include yearly, monthly, daily and hourly usage statistics, and tables of top URLs, entry and exit pages, referrers, search strings, user agents, hosts (client IP addresses) and countries.

Steps followed:

1. Run the Webalizer Windows version.
2. Input the web log file (downloaded from the web) in the *Choose Logfiles* tab.
3. Press **Run Webalizer**. The statistics are generated in the target directory and can be viewed in the report window.

## Terms used in the report:

- **Hits (Anfragen / Requests):** all requests made to the server, including errors.
- **Files (Dateien):** successful requests for all types of objects (html, gif, css, etc.).
- **Pages (Seiten):** document requests such as html, asp and txt.
- **Visits (Besuche):** number of visits made to the site.
- **Sites / Hosts (Rechner):** number of unique client IP addresses or host names.
- **kB:** amount of data transferred.

### User-agents

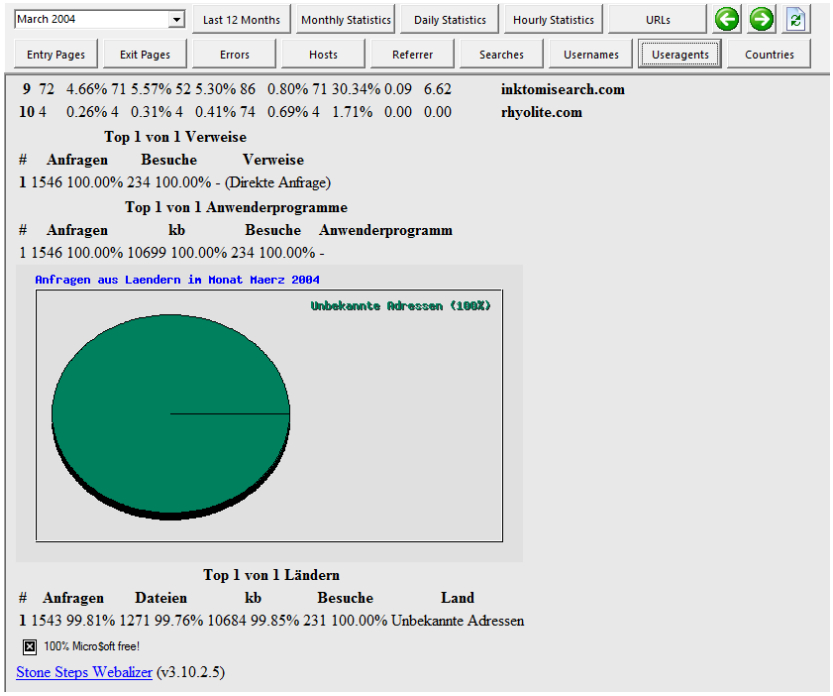

*Fig 4. Webalizer – referrers, user agents and country statistics for March 2004*

# RESULT :

Thus, the web server log file was successfully analysed using the Webalizer tool, and the monthly, daily, hosts, user-agents and country statistics of the web server were generated and studied.
